

Consultant on Digital Workflow

I've been helping people with Photography for over 30 years and Digital Imaging for over 15 years. I taught Photoshop and Photography courses for Camosun College and the University of Victoria. I offer services at your residence or workplace. I can help with the whole, or part of the digital workflow.

DSLR to Point and Shoot, they all have multiple buttons, multiple choices. The manuals are obtuse. Understanding allows control and predictability.

Dedicated Film Scanners and Flat bed scanners. You can improve the quality of your images with the scanning software, better shadow values and highlights. Resolve the resolution dilemmas.

A Photoshop user since 1992. I've owned every version since PS3 to CS4. A fabulous program, but one that can easily overwhelm you with its steep learning curve. Get on the right track and it suddenly it's a lot easier.

A segment of Color Management, its part of the equation where what you see is what you get.

Printing to your desktop color printer can be bewildering when you go through all the possible menu choices. They vary from one version of Photoshop to another, from one printer to another.

Similar issues to the desk tops, but wide format printers have different menus, but ultimately solutions.

Fine Art Printing with Digital Printers

The difference between Fine Art printing and normal printing begins with paper choice. Next, using profiles and refining the image. How to use digital test strips to minimize waste.

InDesign Layout to Books

Using your images and text I create an InDesign document that generates PDF files for books or commercial printing. My consultation fee is \$50.00/ hour plus taxes.
